About Me

I'm a fullstack developer with experience in JavaScript, React, Redux, TypeScript, Node, Express, Python, Django, Flask, Redis, and more. I enjoy creating efficient, user-friendly solutions and solving complex problems with code. I am passionate about learning new technologies and contributing to meaningful projects.

Skills

- JavaScript
- PostgreSQL
- React
- Redis
- TypeScript
- Node (express)
- Redux
- git
- Python
- css
- Django
- English (A2)
- Flask

Education

Molodechno Trade and Economics College 2016 - 2021

I graduated with a secondary education as a programmer technician. During my studies, I learned programming languages such as C#, C++, Assembler, and PHP. It gave me strong technical skills and knowledge in software development.

Belarusian State University of Informatics and Radioelectronics 2021 - 2024

I earned my higher education degree as a systems engineer. While studying, I worked with technologies like HTML, CSS, JavaScript, and Python. This education helped me understand web development and programming in depth.

Experience

Fullstack Developer

Itransition

2021-2024

As a programmer, I contributed to three challenging projects that strengthened my full-stack expertise.

11.05.2023-11.05.2024

Technologies: Django, React, TypeScript, Docker, Docker Compose, CI/CD, Redux

- Developed and maintained full-stack applications, ensuring seamless integration between backend (Django) and frontend (React + TypeScript).
- Optimized deployment workflows using Docker and CI/CD pipelines, improving efficiency and reducing deployment times.
- Implemented state management with Redux to enhance application performance and maintainability.
- Resolved complex bugs and contributed to UI/UX improvements, delivering a smoother user experience.

01.02.2023-10.05.2023

Technologies: Python, Flask, TypeScript, Angular

- Built RESTful APIs using Python (Flask) and integrated them with Angular-based frontends.
- Collaborated on feature development, ensuring clean, maintainable, and scalable code.
- Debugged and fixed critical issues across the stack, improving application stability.

14.12.2021-01.02.2023

Technologies: Ruby, Ruby on Rails, JavaScript, React

- Developed dynamic frontend components using React and integrated them with Ruby on Rails backends.
- Added new UI features, enhancing functionality and user interaction.
- Actively participated in bug-fixing, performance tuning, and code refactoring.

Throughout these roles, I successfully delivered multiple features, fixed critical bugs, and contributed to optimizing both frontend and backend systems. My experience spans a wide range of technologies, allowing me to adapt quickly and solve problems efficiently in different environments.
